

Recently, Maryland Environmental Service reached out to the CAT North carpentry program for assistance on a project. With the plans of creating a new nature-based trail in partnership alongside the Maryland Port Administration, the organizations wanted to hold a groundbreaking ceremony to celebrate the event. Our students were asked to build two ceremonial dirt boxes to be used to kick off the construction.

The pictures below show the two boxes being used at the event. The boxes will be repurposed as a flower garden for a future Maryland Environmental Service project. The CAT North students were happy to help make this project a success.
